Digital Currency Forum

An ecosystem comprising over **100** diverse companies, organizations, experts, and relevant government agencies, aiming to drive innovation in payment infrastructure through the use of the tokenized deposit “DCJPY.”

1. Introduction

1) What is DCP

DCP | Tokenized Deposits with a 2-Layered Platform

DCP is a multi-bank tokenized deposits platform, with a 2-layered architecture consisting of “Business Zone” and “Financial Zone”.

DCP | DCP as a platformer

Our company powers DCP as a platformer, providing service infrastructure to DCJPY issuing banks and companies in the Business Zone.

Issuing bank network in Japan

DCP has followed a strategic roadmap with steady milestones, establishing itself as the nation's only live multi-bank tokenized deposit network with a proven track record of commercial operations.

Cross Border payments

Starting this fiscal year, DCP plans to connect with overseas banks through Partior*.

* Partior is a Singapore-based global platform for tokenized deposits, backed by J.P. Morgan, Temasek and others.

Global Expansion of DCP

We believe that DCP's knowledge of building domestic network of JPY-TD in Japan can be utilized to other countries. We see the future of expanding our capability to other local currencies through the globe.
